Chapter 1: Business Definition

Task 1.1: Names of Editors/writers of the Report

The final report was collaboratively prepared, reviewed, edited, and organized by all members of the project team during meetings

Task 1.2: Business Title

Bloom & Petals Flower Shop System

Task 1.3: Group Name

Group 3

Task 1.4 & 1.5: Team Members and their roles

Shaymaa Dar Taha 1222440

Project manager

Roa Makhtoob 1221636

Requirement Engineer

Marwa Faqeeh 1220039

Programmer

Abeer Hussein 1220425

Technical Architect

Task 1.6: Project management strategy

The team adopted a combination of the **Waterfall** and **Agile** software development models throughout the project. The Waterfall approach was followed to complete the required project phases in sequence according to the course schedule, while Agile practices were applied within each phase to encourage continuous communication, regular progress reviews, and iterative improvements based on instructor feedback.

The team held regular meetings, both face-to-face and online, to discuss requirements, distribute tasks, review completed work, and resolve technical issues. Progress was monitored continuously to ensure that deadlines were met. Most project decisions were made through group discussion and agreement. Whenever different opinions arose, the Project Manager coordinated the discussion and made the final decision after considering the team's suggestions.

Each member was responsible for leading specific tasks while also contributing to reviewing, discussing, validating, and improving the work completed by the other team members. This collaborative approach helped maintain consistency and quality throughout the project.

Task 1.7: Project manager report

As the Project Manager of the Bloom & Petals Flower Shop System project, my main responsibility was to organize the team's work, distribute tasks fairly, monitor our progress, and ensure that every project phase was completed on time. I also communicated with the customer whenever clarification or feedback was needed and coordinated the overall project activities to ensure that the final deliverables met both the customer requirements and the instructor's expectations.

Each team member was committed to her assigned role and completed her individual responsibilities professionally. Roa Makhtoob, as the Requirement Engineer, focused on requirements engineering activities and contributed to several analysis and design tasks. Marwa Faqueh, as the Programmer, completed her assigned tasks and was also responsible for documenting the team meetings, taking meeting screenshots, and maintaining the meeting records included in the project documentation. Abeer Hussein, as the Technical Architect, contributed to the architectural and design aspects of the system and helped ensure consistency between the analysis and design models. Although each member led her assigned tasks, all team members collaborated in reviewing, editing, organizing, and integrating all project phases into the final report to ensure a consistent and high-quality submission.

One of the main challenges was coordinating the team's schedules while balancing other university courses and deadlines. Another challenge was maintaining consistency across all diagrams and documents while incorporating the instructor's feedback after each phase. We successfully addressed these challenges through regular communication, continuous review, and effective teamwork.

Most project decisions were made through discussion and mutual agreement. Whenever there was a tie in voting, I made the final decision as the Project Manager after considering all opinions and selecting the solution that best satisfied the project requirements.

In my opinion, the project was successful because every team member fulfilled her responsibilities, remained committed to her assigned role, and contributed positively to the team's work. We carefully reviewed and addressed all the instructor's feedback throughout the project, continuously

improving each phase until the final submission. The final report reflects the collaborative effort of the entire team and demonstrates our ability to work together effectively while delivering a system that satisfies both the functional and non-functional requirements of the Bloom & Petals Flower Shop System.

Task 1.8: Group members report

❖ Shaymaa Dar Taha (1222440)

I believe the Bloom & Petals Flower Shop System project was a successful and rewarding experience because our team worked collaboratively throughout all project phases and continuously improved the project by addressing the instructor's feedback after each submission. As the Project Manager, I coordinated the team's work, organized meetings, monitored progress, communicated with the customer group, and ensured that the project milestones were completed on time. I led the Effort and Time Estimation task, the Actor Analysis task, the Manage Subscription Use Case Specification, and the Manage Subscription Sequence Diagram. I also worked jointly with Roa Makhtoob on developing the Analysis Class Diagram, the Detailed Class Diagram, and the Overall Architecture Diagram, where we shared the work equally. In addition, I contributed to the Design Goals, Component Diagram, Use Case Diagram, and other project discussions and reviews. Finally, together with all team members, I participated in reviewing, editing, organizing, and integrating all project phases into the final report, as well as preparing the final presentation. This project strengthened my leadership, communication, teamwork, and software engineering skills, and provided me with valuable practical experience in managing and developing a software engineering project.

❖ Marwa Fageeh (1220039)

I believe the Bloom & Petals Flower Shop System project was a successful and rewarding experience because it allowed us to apply software engineering concepts throughout all stages of the software development process. As the Programmer of the team, I contributed by preparing the Customize Floral Arrangement Use Case Specification, developing the Sequence Diagram for the Customize Floral Arrangement Use Case, designing the Activity Diagrams, and developing the Component Diagram. I also contributed to reviewing, discussing, and improving different parts of the project to ensure consistency and quality across the analysis and design models. In addition, I worked with my teammates on reviewing, editing, organizing, and integrating all project phases into the final report, as well as preparing the final presentation. This project enhanced my analytical

thinking, teamwork, communication, and software design skills while giving me valuable practical experience in developing software systems using software engineering principles.

❖ **Roa Makhtoob (1221636)**

I think the Bloom & Petals Flower Shop System project was a successful experience because our team worked well together and always tried to improve the project by applying the instructor's feedback after each phase. As the Requirement Engineer, I led the User Requirements task and the Use Case Diagram. I also prepared the Place Order Use Case Specification and designed the Place Order Sequence Diagram. Together with Shaymaa Dar Taha, I worked equally on developing the Analysis Class Diagram, the Detailed Class Diagram, and the Overall Architecture Diagram. In addition, I contributed to reviewing, discussing, and improving different parts of the project. Finally, together with all team members, I participated in reviewing, editing, organizing, and integrating all project phases into the final report. This project helped me improve my requirements engineering, UML modeling, teamwork, and communication skills, and I am proud of what our team achieved together.

❖ **Abeer Hussein (1220425)**

Throughout the project phases, I believe our team has successfully delivered a well-structured flower shop system that covers all core functionalities. As the team's architectural designer, my contributions focused on shaping the system's structure and technical foundation across multiple phases. In Phase Two, I led Task 2.2 by writing and coordinating the system requirements. In Phase Three, I led the Book Consultation use case description and contributed to both the use case diagram and class diagram collaboratively with the team. In Phase Four, in line with my architectural design role, I took the lead on the deployment diagram and the system design goals task, and independently drew the consultation booking sequence diagram. Overall, I am satisfied with my contributions and believe that my architectural design role had a significant impact on the system's structure and success.

Chapter 2: Requirement Elicitation, Analysis and Modelling

Task 2.1: Requirement statement/Business description.

Bloom & Petals is a flower shop that operates through both a physical store and an online platform. The business specializes in selling fresh flowers, floral arrangements, and bouquets for different occasions such as weddings, birthdays, anniversaries, holidays, and corporate events. The shop purchases flowers from local growers and trusted suppliers to ensure high quality and freshness.

The business offers a variety of services, including flower sales, custom floral arrangements, local and same-day delivery, scheduled delivery, flower subscription plans, consultation services, and floral workshops. Customers can browse products, place orders, customize arrangements, choose delivery options, and make payments either in-store or online.

The Flower Shop Management System is developed to simplify and automate the business operations. It allows customers to manage their orders and accounts easily, while helping employees manage flowers, inventory, deliveries, payments, subscriptions, consultations, and workshop registrations efficiently. The system aims to improve customer satisfaction, reduce manual work, and provide a faster and more organized service.

Task 2.2: USER and SYSTEM Requirements

2.2.1 User Requirement

Table 1: Task 2.2.1 Leadership and Contributions

Role	Name	Contribution
Lead	Roa Makhtoob	Writing and coordination
Contributor	Abeer Hussein	Reviewing
Contributor	Shaymaa Dar Taha	Discussing & coordination
Contributor	Marwa Fageeh	Feasibility feedback & review

UR1: Fresh flower browsing

The system shall allow customers to browse fresh flowers, including individual bouquets, seasonal selections, and imported flowers.

UR2: Order placement

The system shall allow customers to place orders for fresh flowers and pre-designed floral arrangement packages.

UR3: Custom arrangement design**MODIFIED**

The system shall allow customers to customize floral arrangements based on occasion, preferences, and budget.

UR3.1: On-site floral installation**MODIFIED**

The system shall allow customers to request on-site setup or physical venue installation for floral arrangements as a separate field service.

UR4: Delivery services

The system shall provide local delivery services within the city, including a same-day delivery option subject to an additional fee.

UR5: Subscription services

The system shall allow customers to subscribe to a recurring flower delivery service with flexible weekly, monthly, or yearly plans and customizable schedules.

UR6: Scheduled delivery

The system shall allow customers to schedule delivery for a future date and time.

UR7: Payment methods

The system shall support multiple payment methods, including cash (in-store), credit cards, and online payments.

UR8: Consultation booking

The system shall allow customers to book consultation sessions (in-store or virtual) for floral design assistance.

UR9: Workshop registration

The system shall allow customers to register for floral workshops (online or in-store) at beginner, intermediate, or advanced levels.

UR10: Customer account management**MODIFIED**

The system shall allow customers to create and manage a personal account.

Environmental Constraints:

MODIFIED

EC1: The system shall support access through modern web browsers including Chrome, Firefox, Edge, and Safari.

2.2.2 System Requirement

Table 2: Task 2.2.2 Leadership and Contributions

Role	Name	Contribution
Lead	Abeer Hussein	Writing and coordination
Contributor	Roa Makhtoob	Requirement alignment
Contributor	Marwa Fageeh	Technical validation
Contributor	Shaymaa Dar Taha	Coordination & finalising

UR1: Fresh flower browsing

SR1.1: The system shall display flowers organized into categories such as bouquets, seasonal flowers, and imported flowers.

SR1.2: The system shall display flower details including name, price, image, description, and availability, and allow customers to view full details of a selected flower.

SR1.3: The system shall allow customers to search for flowers by name or keywords.

SR1.4: The system shall allow customers to filter flowers based on category, price range, and occasion.

SR1.5: The system shall indicate whether a flower is available or out of stock.

MODIFIED

SR1.6: The system shall allow staff to access and view flower details and categories.

UR2: Order placement

SR2.1: The system shall allow customers to add flowers or arrangements to a shopping cart (online orders).

SR2.2: The system shall allow staff to create orders for customers in-store.

SR2.3: The system shall allow customers or staff to update or remove items from the order.

SR2.4: The system shall display the total price of the order.

SR2.5: The system shall allow customers or staff to confirm and submit an order.

SR2.6: The system shall generate a unique order ID for each confirmed order.

MODIFIED

SR2.7: The system shall store order details including items, quantities, and total cost.

SR2.8: The system shall ensure that an order contains at least one item before confirmation.

SR2.9: The system shall confirm and process orders within 3 seconds under normal operating conditions.

UR3: Custom arrangement design

SR3.1: The system shall allow customers to enter and select details for a custom arrangement, including occasion, preferences, colors, budget, and desired flower types or styles.

SR3.2: The system shall allow customers to request on-site setup or installation.

SR3.3: The system shall store custom arrangement requests for processing by the florist

SR3.4: The system shall allow staff to review and manage custom arrangement requests.

SR3.5: The system shall allow staff to update the status of custom orders (pending, confirmed, completed).

SR3.6: The system shall allow staff to provide confirmation or feedback for custom arrangement requests.

UR4: Delivery services

SR4.1: The system shall allow customers or staff to enter delivery details including address, contact information, and delivery instructions.

SR4.2: The system shall validate that the delivery address is within the supported delivery area.

SR4.3: The system shall allow customers or staff to select delivery type (standard or same day).

SR4.4: The system shall apply an additional fee for same-day delivery.

SR4.5: The system shall store delivery details with the order.

SR4.6: The system shall allow staff to manage and update delivery status (scheduled, out for delivery, delivered).

UR5: Subscription services

SR5.1: The system shall allow customers to select a subscription delivery frequency (weekly, monthly, or yearly).

SR5.2: The system shall allow customers or staff to define the subscription duration, including start date and end date.

SR5.3: The system shall allow customers or staff to customize subscription delivery schedules, including preferred delivery dates, times, addresses, and flower preferences.

SR5.4: The system shall allow customers to choose a subscription tier (Basic or Premium).

SR5.5: The system shall assign and automatically apply subscription benefits based on the selected tier, including discounts, delivery advantages, priority processing, and access to seasonal or exclusive flowers.

SR5.6: The system shall allow customers or staff to pause, modify, renew, or cancel a subscription.

SR5.7: The system shall store subscription details including delivery frequency, duration, schedule, preferences, and tier.

SR5.8: The system shall allow staff to view and manage customer subscriptions.

SR5.9: The system shall notify customers about upcoming subscription deliveries and subscription expiration dates

UR6: Scheduled delivery

SR6.1: The system shall allow customers or staff to select a future delivery date.

SR6.2: The system shall validate that the selected delivery date is available for delivery.

SR6.3: The system shall store scheduled delivery details with the order.

SR6.4: The system shall allow staff to view and manage scheduled deliveries.

UR7: Payment methods

SR7.1: The system shall allow customers or staff to select a payment method for an order.

SR7.2: The system shall support cash payment for in-store orders.

SR7.3: The system shall support credit card payments.

SR7.4: The system shall support online payment methods.

SR7.5: The system shall confirm payment before completing an order.

MODIFIED

SR7.6: The system shall store payment details associated with each order.

SR7.7: The system shall store payment information securely associated with each order.

SR7.8: The system shall ensure secure payment transactions.

UR8: Consultation booking

SR8.1: The system shall display available consultation time slots.

SR8.2: The system shall allow customers or staff to select a consultation type (in-store or virtual).

SR8.3: The system shall allow customers or staff to select a consultation date and time.

SR8.4: The system shall validate that the selected time slot is available.

SR8.5: The system shall store consultation booking details including date, time, and type.

SR8.6: The system shall allow staff to view and manage consultation bookings.

UR9: Workshop registration

SR9.1: The system shall display available workshops including level, date, time, and price.

SR9.2: The system shall allow customers or staff to select a workshop type (online or in store).

SR9.3: The system shall allow customers or staff to register for a selected workshop.

SR9.4: The system shall validate that workshop capacity is not exceeded before registration.

SR9.5: The system shall store workshop registration details including participant information and selected workshop.

SR9.6: The system shall allow staff to view and manage workshop registrations.

UR10: Customer account management

SR10.1: The system shall allow customers to create and log in to an account.

SR10.2: The system shall allow customers to view their order history.

SR10.3: The system shall allow customers to track the status of their deliveries.

SR10.4: The system shall allow customers to manage their subscription settings.

SR10.5: The system shall allow customers to save and update delivery addresses and personal preferences.

SR10.6: The system shall allow customers to submit ratings and reviews for completed orders.

SR10.7: The system shall store customer account information securely.

SR10.8: The system shall allow staff to view customer account details when needed.

SR10.9: The system shall maintain customer account data availability with regular backup procedures.

MODIFIED

EC1: The system shall support access through modern web browsers including Chrome, Firefox, Edge, and Safari.

Task 2.3: Effort/Time estimation calculation

Table 3: Task 2.3 Leadership and Contributions

Role	Name	Contribution
Lead	Shaymaa Dar Taha	Writing and coordination
Contributor	Abeer Hussein	System complexity estimation
Contributor	Marwa Fageeh	Development effort estimation
Contributor	Roa Makhtoob	Scope clarification & reviewing

MODIFIED

Acronyms: **pw** = person week, **pm** = person month, **w** = week, **m** = month.

Assumptions:

1 week = 5 days

1 working day = 8 hours

Schedule time includes an additional 30% buffer for testing, meetings, fixes, and unexpected delays.

Table 4: Effort/Time estimation calculation.

UR	Estimated No. of Developers	Estimated Effort (Average/developer)	Total Effort (Person-Weeks)
UR1 – Fresh flower browsing	2	1 pw	$2 \times 1 = 2$ pw
UR2 – Order placement	3	2 pw	$3 \times 2 = 6$ pw
UR3 – Custom arrangement design	2	2 pw	$2 \times 2 = 4$ pw
UR4 – Delivery services	2	1 pw	$2 \times 1 = 2$ pw
UR5 – Subscription services	3	3 pw	$3 \times 3 = 9$ pw
UR6 – Scheduled delivery	2	1 pw	$2 \times 1 = 2$ pw
UR7 – Payment methods	2	2 pw	$2 \times 2 = 4$ pw
UR8 – Consultation booking	2	1 pw	$2 \times 1 = 2$ pw
UR9 – Workshop registration	2	1 pw	$2 \times 1 = 2$ pw
UR10 – Customer account management	3	3 pw	$3 \times 3 = 9$ pw

Total: 10	23	17 pw	42 pw
-----------	----	-------	-------

2.3.1 Schedule Time Estimation:

Total Effort = **42 Person-Weeks**

Team Size = **4 Developers**

$$42 \div 4 = 10.5 \approx \mathbf{11 \text{ weeks}}$$

With 30% contingency:

$$11 \times 1.30 = 14.3 \approx \mathbf{14 \text{ weeks}}$$

2.3.2 Cost Estimation

Average Developer Salary: \$700 per Person-Week

Estimated Project Cost:

$$42 \times \$700 = \mathbf{\$29,400}$$

2.3.3 Profit Margin Estimation

Minimum Cost (10% Profit)

$$\$29,400 \times 1.10 = \mathbf{\$32,340}$$

Maximum Cost (30% Profit)

$$\$29,400 \times 1.30 = \mathbf{\$38,220}$$

Task 2.4: ACTORS analysis and their description

Table 5: Task 2.4 Leadership and Contributions

Role	Name	Contribution
Lead	Shaymaa Dar Taha	Actor identification
Contributor	Abeer Hussein	Reviewing
Contributor	Roa Makhtoob	Discussing
Contributor	Marwa Fageeh	validation

MODIFIED

Table 6: Actor Analysis.

Actor	Semantics / Description
Customer	This actor represents a person who purchases flowers and floral services through the system. The customer interacts with the system to browse products, place orders, manage subscriptions, make payments, and receive delivery-related services.
Customer Service Staff	This actor represents the employee who assists customers with in-store and online services. The Customer Service Staff handles customer orders, manages subscriptions, books consultations, supports workshop registration, and assists customers during the purchasing process.
Florist	This actor represents the flower specialist responsible for preparing floral arrangements and fulfilling custom floral design requests. The florist also provides professional floral consultation when required.
Delivery Staff	This actor represents the employee responsible for delivering customer orders and updating the delivery status within the system.
Manager	This actor represents the administrator responsible for managing the flower shop operations, system administration, staff, products, and business resources.

2.5.2 Link:

https://lucid.app/lucidchart/c86756a7-1317-4fe5-b9b8-1f6ab43c94be/edit?viewport_loc=-6722%2C-5594%2C19012%2C6982%2C0_0&invitationId=inv_42418c4f-c1df-4ff0-85f7-bb104e764e4d

2.5.3 Use Case Diagram Description:

The Use Case Diagram illustrates the interactions between the actors and the Bloom & Petals Flower Shop System. The primary actors include the Customer, Customer Service Staff, Florist, Delivery Staff, and Manager, while the Payment System and Notification System act as secondary actors that provide external services to the system.

The Customer is the main actor and can browse flowers, search and filter products, view flower details, place orders, request delivery services, track deliveries, manage subscriptions, customize floral arrangements, book consultations, register for workshops, manage account information, and submit reviews. The Customer Service Staff supports customers by creating orders, managing accounts, registering customers for workshops, booking consultations, and assisting with purchases.

The Place Order use case represents the central functionality of the system. It is connected to payment processing, delivery requests, order confirmations, and payment confirmations. Customers may also request delivery services, schedule future deliveries, and track delivery status after placing an order.

The Florist is responsible for handling custom arrangement requests, conducting consultations, and conducting workshops. When customers request customized floral arrangements, consultations, or workshop registrations, the system interacts with the Florist to process these services.

The Delivery Staff manages deliveries, updates delivery status, and confirms successful deliveries. The Manager is responsible for administrative functions such as managing products, workshops, consultations, staff access privileges, and generating reports.

The Payment System processes electronic payments, while the Notification System sends various notifications, including order confirmations, payment confirmations, consultation confirmations, workshop registration confirmations, and subscription reminders.

Overall, the diagram demonstrates how the different actors collaborate with the system to support ordering, customization, delivery management, subscription services, consultations, workshops, and business administration.

Task 2.6: Description of key USE-CASES

Table 8: Task 2.6 Use Cases Distribution.

Name	Use Case
Marwa Faqeeh	Customize Floral Arrangement
Abeer Hussein	Book Consultation
Shaymaa Dar Taha	Manage Subscription
Roa Makhtoob	Place order

This section presents the detailed specifications of the key use cases for the Bloom & Petals Flower Shop System. The contribution of each group member is presented in Table 4, and the corresponding use case specification follows.

MODIFIED

2.6.1 Use Case Specification – Customize Floral Arrangement

Prepared by: Marwa Faqeeh (1220039)

Table 9: Use Case Specification – Customize Floral Arrangement.

System Name	Bloom & Petals Flower Shop System
Use Case Title	Customize Floral Arrangement
Description	A customer may request a customized floral arrangement based on occasion, preferred flowers, colors, style, and budget. The request can be made online by the customer or in-store with help from Customer Service Staff. The Florist reviews the request, checks availability, and confirms the arrangement or suggests modifications.
Actors	Customer, Customer Service Staff, Florist, Notification System.
Data	Occasion, flower preferences, colors, arrangement style, budget, setup request, florist feedback, request status

Stimulus/Trigger	Customer selects or requests the Customize Floral Arrangement service
Pre-conditions	1. The customization service is available. 2. The customer can access the system online or visit the flower shop. 3. A Florist is available to review the request.
Workflow OR Sequence/Flow of Events	1. Customer requests a customized floral arrangement online or in-store. 2. If the request is made in-store, Customer Service Staff assists the customer in creating the request. 3. Customer provides the occasion, preferred flowers, colors, arrangement style, budget, and any special requirements. 4. Customer submits the customization request. 5. The system records the request and forwards it to the Florist. 6. The Florist reviews the customization request. 7. The Florist checks flower availability and evaluates the feasibility of the requested arrangement. 8. If the requested arrangement can be prepared, the Florist confirms the arrangement. 9. Else, if one or more requested flowers are unavailable, the Florist suggests alternative flowers or modifications. 10. If the customer accepts the proposed modifications, the workflow continues. 11. Else, if the customer rejects the proposed modifications, the customer may submit revised preferences or cancel the customization request. 12. The system updates the request status. 13. The Notification System sends a customization confirmation or feedback to the customer.

Post-conditions/Response	1. The customization request is saved in the system. 2. The request status is updated as Pending, Confirmed, Requiring Modification, or Cancelled. 3. The customer receives confirmation or feedback regarding the request.
Comments	The customer must provide enough details for the Florist to prepare a suitable arrangement. The request may later be converted into an order after customer approval.

2.6.2 Use Case Specification – Book Consultation

Prepared by: Abeer Hussein (1220425)

Table 10: Use Case Specification –Book Consultation.

System Name	Bloom & Petals Flower Shop System
Use case Title	Book Consultation
Description	A customer may book a consultation session for floral design assistance through the online system. For in-store customers, Customer Service Staff may create and manage the consultation booking on the customer's behalf. The system displays available consultation time slots and allows the selection of a consultation type (In-Store or Virtual), date, and time. The system validates slot availability and stores the consultation details upon successful booking.
Actors	Customer, Customer Service Staff, Florist, Notification System.
Data	Customer information, consultation booking details, consultation type, consultation date and time, booking status.
Stimulus/Trigger	Customer or Customer Service Staff requests to book a consultation session.
Pre-condition	1. Available consultation time slots exist. 2. Customer information is available. 3. The selected consultation date is valid.

	4. A Florist is available to conduct the consultation.
Workflow Or sequence/flow of events	1. Customer requests a consultation online, or Customer Service Staff creates a consultation booking for an in-store customer. 2. The system displays available consultation time slots. 3. The Customer or Customer Service Staff selects the consultation type (In-Store or Virtual). 4. The Customer or Customer Service Staff selects the consultation date and time. 5. The system validates that the selected time slot is available. 6. If the slot is available, the system stores the consultation booking details. 7. Else, if the selected time slot is unavailable, the system notifies the customer and displays other available time slots. The customer may select another available time slot or cancel the booking request. 8. The system assigns the consultation to the Florist's schedule. 9. The system confirms the booking. 10. The Notification System sends a consultation confirmation to the customer. 11. The Florist conducts the consultation at the scheduled date and time.
Post- conditions/Response	1. Consultation booking details are stored in the system if the booking is successful. 2. The selected time slot becomes unavailable for other bookings. 3. Customer Service Staff and the Florist can view the consultation booking. 4. The customer receives a consultation confirmation or a notification if the booking is cancelled.
Comments	Customer Service Staff members must have appropriate permissions to view and manage consultation bookings. Consultation bookings are assigned to an available Florist.

MODIFIED

2.6.3 Use Case Specification – Manage Subscription

Prepared by: Shaymaa Dar Taha (1222440)

Table 11: Use Case Specification –Manage Subscription.

System Name	Bloom & Petals Flower Shop System
Use Case Title	Manage Subscription
Description	A customer can create and manage a recurring flower delivery subscription. The customer selects the subscription frequency, duration, tier, delivery schedule, address, and flower preferences. For in-store customers, Customer Service Staff may create or manage subscriptions on the customer's behalf. The subscription can later be modified, paused, renewed, or cancelled.
Actors	Customer, Customer Service Staff, Notification System.
Data	Customer account information, subscription frequency, start date, end date, subscription tier, delivery schedule, delivery address, flower preferences, subscription status
Stimulus/Trigger	The customer selects the "Manage Subscription" option from their account, or Customer Service Staff creates/manages a subscription for an in-store customer.
Pre-conditions	1. The customer has a registered account. 2. The customer is logged into the system, or Customer Service Staff is authorized to manage subscriptions. 3. Subscription services are available.
Workflow / Sequence of Events	1. Customer accesses the subscription management page, or Customer Service Staff opens the subscription management service for an in-store customer. 2. The system displays available subscription plans and options.

	3. Customer or Customer Service Staff selects a subscription frequency (weekly, monthly, or yearly). 4. Customer or Customer Service Staff selects a subscription tier (Basic or Premium). 5. Customer or Customer Service Staff enters the delivery schedule, address, and flower preferences. 6. The system validates the entered information. 7. If the entered information is valid, Customer or Customer Service Staff confirms the subscription details. 8. Else, if the entered information is invalid or incomplete, the system displays an error message and prompts the customer or Customer Service Staff to correct the information. 9. The system stores the subscription information. 10. The system activates a new subscription or updates an existing subscription. 11. The Notification System sends a confirmation message to the customer.
Post-conditions/Response	1. The subscription is successfully created, updated, paused, renewed, or cancelled. 2. Subscription information is stored in the system. 3. Subscription status is updated. 4. The customer receives a confirmation notification, or an error notification if the subscription request cannot be completed.
Comments	Customers may modify, pause, renew, or cancel subscriptions at any time. Customer Service Staff members with appropriate permissions can manage subscriptions for in-store customers. The Notification System is responsible for sending subscription confirmations and reminder notifications.

2.6.4 Use Case Specification – Place Order

Prepared by: Roa Makhtoob (1221636)

Table 12: Use Case Specification –Place Order.

System Name	Bloom & Petals Flower Shop System
Use Case Title	Place Order
Description	A customer may place an order for flowers or floral arrangements through the online flower shop system. For in-store purchases, Customer Service Staff may place the order on behalf of the customer. The order may include standard delivery, same-day delivery, scheduled delivery, or a previously approved custom floral arrangement. After successful payment, the system confirms the order, sends notifications, and forwards the flower preparation task to the Florist.
Actors	Customer, Customer Service Staff, Florist, Payment System, Notification System, Delivery Staff
Data	Customer information, flower information, order details, payment information, delivery information, delivery type, order status
Stimulus / Trigger	Customer decides to purchase flowers or a floral arrangement online or in-store.
Preconditions	1. Selected flowers or arrangements are available. 2. Customer has selected at least one product or an approved custom arrangement. 3. The system is operational. 4. Payment services are available.

Workflow / Sequence
of Events

1. Customer browses flowers and views flower details online, or Customer Service Staff assists an in-store customer.
2. Customer or Customer Service Staff selects flowers, floral arrangements, or an approved custom arrangement.
3. Customer or Customer Service Staff places the order.
4. Customer may request delivery.
5. If delivery is requested:
 - 5.1 Customer or Customer Service Staff enters delivery address, contact information, and delivery instructions.
 - 5.2 The system validates that the delivery address is within the supported area.
 - 5.3 Customer or Customer Service Staff selects the delivery type: Standard Delivery, Same-Day Delivery, or Scheduled Delivery.
 - 5.4 If Same-Day Delivery is selected, the system adds the extra delivery fee to the order total.
 - 5.5 If Scheduled Delivery is selected, Customer or Customer Service Staff selects a future delivery date and time.
 - 5.6 The system validates that the selected delivery date and time are available.
6. The system calculates the total price of the order, including products, customization cost, and any delivery fees.
7. The system displays an order summary showing the selected items, delivery details, and total price.
8. Florist reviews and confirms the order details.
9. Customer selects a payment method.

10. If the order is placed online:

10.1 Customer pays using a card or supported online payment method.

10.2 Payment System processes the payment.

11. If the order is placed in-store:

11.1 Customer may pay using cash or card.

11.2 If card payment is selected, Payment System processes the payment.

11.3 If cash payment is selected, Customer Service Staff records the payment in the system.

12 If payment is successful:

12.1 The system records the payment.

12.2 The system updates the order status to Confirmed.

12.3 The system stores order and delivery details.

12.4 Notification System sends a payment confirmation to the customer.

12.5 Notification System sends an order confirmation to the customer.

12.6 Florist prepares the flowers or floral arrangement according to the order specifications.

12.7 Florist updates the preparation status when the arrangement is ready.

12.8 If delivery was requested, Delivery Staff manages the delivery process.

12.9 Delivery Staff updates the delivery status until the order is delivered.

	13. Else, if payment is not successful: 13.1 The system displays a payment failure message. 13.2 Customer may retry the payment. 13.3 Customer may select another payment method. 13.4 Customer may cancel the order.
Postconditions / Response	1. The order is successfully recorded in the system. 2. Payment information is stored if payment is completed successfully. 3. Order and payment confirmations are sent to the customer. 4. The Florist receives and prepares the flower order. 5. Delivery information is stored if delivery is requested. 6. Delivery status is updated until the order is completed.
Comments	This is the central use case of the system because it connects product selection, custom arrangement requests, order placement, payment processing, florist preparation, notifications, and delivery management.

Task 2.7: ACTIVITY diagram

Table 13: Task 2.7 Leadership and Contributions

Role	Name	Contribution
Lead	Marwa Fageeh	Activity Diagram Design
Co-leader	Abeer Hussein	Workflow Analysis
Contributor	Shaymaa Dar Taha	Scenario Development
Contributor	Roa Makhtoob	Model Verification & Finalization

2.7.1 Activity Diagram:

Figure 2: Activity Diagram.

2.7.2 Link:

https://lucid.app/lucidchart/c6a84274-87c6-4426-8711-f6588aeb1d14/edit?viewport_loc=-2087%2C-797%2C2056%2C1564%2C0_0&invitationId=inv_74124529-43a8-4390-a4d3-ac6b8704eaae

2.7.3 Activity Diagram Description:

The activity diagram shows how the different users and external systems interact with the Bloom & Petals Flower Shop System. The process starts when a customer accesses the system online or visits the flower shop and receives assistance from Customer Service Staff.

The customer can browse flowers, search for products, view flower details, place orders, request custom floral arrangements, book consultations, register for workshops, or manage subscriptions. If the customer decides to place an order, the system collects the order details, calculates the total price, and processes the payment using the Payment System.

For custom floral arrangements, the request is reviewed by the Florist, who checks flower availability and prepares the arrangement based on the customer's requirements. The Florist is also responsible for conducting consultations and workshops.

If delivery is requested, Delivery Staff manages the delivery process and updates the delivery status. The Notification System sends confirmations, reminders, and updates related to orders,

payments, subscriptions, consultations, workshops, and deliveries.

The Manager is responsible for administrative tasks such as managing products, workshops, consultations, staff access, and reports. The process ends when the requested service is completed and the system updates all related information.

Chapter 3: Requirements Analysis and Modelling

Task 3.1: System CLASS Diagrams

Table 14: Task 3.1 Leadership and Contributions

Role	Name	Contribution
Lead	Roa Makhtoob	Class Identification
Co-leader	Shaymaa Dar Taha	Relationship Design
Contributor	Abeer Hussein	Diagram Review
Contributor	Marwa Fageeh	Validation & Finalization

3.1.1: Analysis class model

3.1.1.1 Analysis class Diagram:

Figure 3: Analysis Class Diagram.

3.1.1.2 Link:

https://lucid.app/lucidchart/62e706f2-c799-4734-b7b5-8fdc7c44d398/edit?viewport_loc=-4486%2C-1842%2C7794%2C3800%2C0_0&invitationId=inv_958d03b9-318f-400b-bee8-b81df300e838

3.1.1.3 Analysis Class Diagram Description:

The Analysis Class Diagram presents the conceptual structure of the Bloom & Petals Flower Shop System by identifying the main business entities and the relationships between them during the analysis phase. The diagram focuses on the problem domain rather than implementation details.

The central entity is the Customer, who interacts with the system by placing orders, requesting custom floral arrangements, booking consultations, registering for workshops, subscribing to recurring flower delivery services, and submitting reviews. Each Order contains one or more Order Items, which are associated with Flowers, while payments and deliveries are linked to the corresponding order. The system also includes supporting entities such as Subscription, Consultation, Workshop, Workshop Registration, Notification, and Address to represent the main business processes.

In addition, the diagram models the different system actors as analysis classes, including Customer Service Staff, Florist, Delivery Staff, Manager, Payment System, and Notification System, illustrating how each role interacts with the business entities. Overall, the diagram provides a high-level conceptual view of the system and establishes the foundation for the detailed design model.

3.1.2: Detailed Class Model

3.1.2.1 Detailed Class Diagram:

Figure 4: Detailed Class Diagram.

3.1.2.2 Link:

https://lucid.app/lucidchart/1e47675c-2365-433a-9736-adc0a5441a21/edit?viewport_loc=-7102%2C-3375%2C15587%2C7600%2C0_0&invitationId=inv_f63aabeeb-900a-4ceb-b53d-f8228f78fc4e

3.1.2.3 Detailed Class Diagram Description:

The Detailed Class Diagram extends the Analysis Class Diagram by providing the complete object-oriented design of the Bloom & Petals Flower Shop System. Each class includes its key attributes and operations, together with the associations, multiplicities, aggregation, composition, and dependency relationships required for implementation.

The diagram models all core business entities, including Customer, Order, Order Item, Flower, Subscription, Custom Arrangement, Consultation, Workshop, Workshop Registration, Payment, Delivery, Notification, Review, Address, and Report, as well as the staff roles and external services. The relationships between these classes define how data is created, managed, and exchanged throughout the system.

Compared with the Analysis Class Diagram, this model introduces implementation-level details such as class attributes, methods, and precise relationship constraints, making it suitable as a blueprint for software development and database implementation while ensuring consistency with the system requirements and business rules.

Task 3.2: SEQUENCE Diagram

Table 15: Task 3.2 Use Cases Distribution for Sequence Diagram.

Name	Use Case
Marwa Fageeh	Customize Floral Arrangement
Abeer Hussein	Book Consultation
Shaymaa Dar Taha	Manage Subscription
Roa Makhtoob	Place order

Chapter 4: System Modelling and Design

Task 4.1: Description of chosen Design Goals

Table 16: Task 4.1 Leadership and Contributions.

Role	Name	Contribution
Lead	Abeer Hussein	Design Goal Selection
Contributor	Marwa Fageeh	Goal Analysis
Contributor	Shaymaa Dar Taha	Goal Description
Contributor	Roa Makhtoob	Review & Finalization

1. High Cohesion

The system will be organized into specialized modules, where each module is responsible for a single business function such as order management, payment processing, delivery management, subscription management, workshop registration, and customer account management. This improves maintainability, readability, and testing.

2. Low Coupling

The modules will be designed to interact through well-defined interfaces while remaining independent. Changes made to one module, such as the payment module, should have minimal impact on other modules like delivery, workshops, or subscriptions. This improves flexibility and simplifies future enhancements.

Design Goal: Security

SR7.7: The system shall store payment information securely associated with each order.

Security Design Goal:

The system shall protect sensitive customer information, especially payment data, by ensuring secure storage and controlled access to customer accounts.

Task 4.2: Component Diagram of Bloom & Petal system

Table 17: Task 4.2 Leadership and Contributions.

Role	Name	Contribution
Lead	Marwa Fageeh	Component Design
Contributor	Abeer Hussein	Interface Mapping
Contributor	Shaymaa Dar Taha	Diagram Modeling
Contributor	Roa Makhtoob	Review & Validation

4.2.1 Component Diagram:

Figure 9: Component Diagram.

4.2.2 Link:

https://lucid.app/lucidchart/8cf4efee-f4a5-464a-8b55-fb9eb458c237/edit?viewport_loc=-2476%2C-657%2C6925%2C2816%2C0_0&invitationId=inv_5f8b6f84-da98-40dd-aa5c-aad11c408996

4.2.3 Component Diagram Description:

The Component Diagram represents the high-level organization of the Bloom & Petals Flower Shop System by dividing it into modular components based on the functional requirements and use case specifications developed in the previous phases. Each major business function is modeled as an independent component with a well-defined responsibility. For example, Customer Account, Flower Catalog, Order Management, Custom Arrangement Management, Subscription Management, Consultation Management, Workshop Management, Delivery Management, Payment Processing, and Review Management each implement a specific set of business services identified from the system use cases.

The diagram is organized using a three-layer architecture. The UI Layer contains separate user interfaces for customers, customer service staff, florists, delivery staff, and managers. These interfaces communicate with the corresponding business components through the provided interfaces. The Business Layer contains the core application logic responsible for processing requests, enforcing business rules, and coordinating the system operations. The Infrastructure Layer provides shared technical services, including data persistence, security, payment gateway integration, and SMS/Email notification services. Business components access these infrastructure services through required interfaces, while persistent data is stored in the Flower Shop Database.

Task 4.3: Overall Architecture Diagram

Table 18: Task 4.3 Leadership and Contributions.

Role	Name	Contribution
Lead	Shaymaa Dar Taha	Architecture Design
Co-Lead	Roa Makhtoob	Layer Design
Contributor	Marwa Fageeh	Architecture Review
Contributor	Abeer Hussein	Diagram Validation

4.3.1 Architecture Diagram:

Figure 10: Architecture Diagram.

4.3.2 Link:

https://lucid.app/lucidchart/05151dc3-2df5-4d8c-83b2-8194d3dbb98d/edit?viewport_loc=-1350%2C-1298%2C5776%2C2816%2C0_0&invitationId=inv_79704d60-4552-471d-b7f8-eac6896fc347

4.3.3 Layer Architecture Description:

The overall architecture of the Bloom & Petals Flower Shop System is designed using a Three-Layer Architecture. This architecture divides the system into three main layers: the Presentation Layer, the Business Layer, and the Data Layer. The diagram maps the system components onto these layers to show how users interact with the system, how business functions are processed, and how data is stored and managed.

The Presentation Layer represents the user interface of the system. It includes the web/mobile UI used by the main users of the system, including the Customer, Staff, and Manager. This layer is responsible for receiving user requests and displaying system responses. It does not contain business rules, which helps keep the interface simple and easier to modify.

The Business Layer contains the main functional components of the flower shop system. These components include Flower Management, Order Management, Delivery Management, Subscription Management, Payment Management, Consultation & Workshop Management, and Account Management. This layer is responsible for applying business rules, processing requests, coordinating system operations, and connecting the user interface with the database.

The Data Layer contains the Flower Shop Database, which stores and manages the system data, including customer information, flower details, orders, payments, subscriptions, deliveries, consultations, workshops, accounts, and reports. Separating the database from the business logic improves data organization and makes the system easier to maintain and update.

The Three-Layer Architecture was chosen because it supports the main design goals of the system. First, it improves low coupling because each layer has a clear responsibility and depends only on the layer below it. For example, changes in the user interface do not directly affect the database. Second, it supports high cohesion because each layer groups related responsibilities together: the Presentation Layer handles user interaction, the Business Layer handles system logic, and the Data Layer handles data storage. Third, it improves maintainability and scalability, which are important non-functional requirements for the Bloom & Petals system. New services, such as additional payment methods or new delivery options, can be added mainly in the Business Layer without changing the whole system.

Overall, this architecture provides a clear separation of responsibilities, supports future system expansion, simplifies testing and maintenance, and ensures that the system can handle the main business services in an organized and reliable way.

Task 4.4: Deployment Diagram

Table 19: Task 4.4 Leadership and Contributions.

Role	Name	Contribution
Lead	Abeer Hussein	Deployment Design
Contributor	Roa Makhtoob	Node Configuration
Contributor	Marwa Fageeh	Connection Mapping
Contributor	Shaymaa Dar Taha	Review & Validation

4.4.1 Deployment Diagram:

Figure 11: Deployment Diagram.

4.4.2 Link:

https://lucid.app/lucidchart/5a770484-792a-4ea4-b1c8-fe800cf4ee0f/edit?viewport_loc=-1809%2C-454%2C3479%2C1696%2C0_0&invitationId=inv_e53751f1-3bfc-4c28-8f15-04ff954b5290

4.4.3 Deployment Diagram Description:

Bloom & Petals is a flower shop web application built on a three-tier deployment architecture. At the top layer, users interact with the system through a web browser running the BloomAndPetals.ps front-end interface, which communicates with the back-end securely over HTTPS. The middle layer consists of a Web/Application Server hosting six independent microservices — handling orders, delivery, subscriptions, consultations, workshops, and user accounts — each packaged as a separate .jar file, allowing each service to be developed, deployed,

and scaled independently. These services connect to three specialized back-end servers: a Database Server storing all application data in FlowerShopDB.sql, accessed via TCP for fast internal communication; a Notification Server responsible for sending alerts and messages to users; and a Payment Server that processes financial transactions through a dedicated PaymentAPI.jar — both of the latter accessed over HTTPS to ensure encrypted and secure data transfer.

Appendix-I: Minutes of meetings

Meeting 1 – Project Planning Meeting

Date: 5/4/2026

Time: 8:00 PM

Attendees

- Marwa Faqeeh (1220039)
- Roa Makhtoob (1221636)
- Shaymaa Dar Taha (1222440)
- Abeer Hussein (1220425)

Topic of Discussion

- Forming the project team and confirming the group members.
- Assigning the roles and responsibilities of each team member.
- Discussing the project management strategy and communication method.
- Planning the project schedule and setting internal deadlines.
- Distributing the tasks required for Phase 0.1 before the submission deadline.

Meeting 2 – Phase 1.1 Business Definition Meeting

Date: 15/4/2026

Time: 8:30 PM

Attendees

- Marwa Faqeeh
- Roa Makhtoob
- Shaymaa Dar Taha
- Abeer Hussein

Topic of Discussion

- Reviewing the Solar Cell Shop business description.
- Discussing the business services and business processes.
- Reviewing the business capacity, employees, and stakeholders.
- Assigning the remaining writing tasks for Phase 1.1.

Meeting 3 – Phase 1.1 Final Review Meeting

Date: 18/4/2026

Time: 9:30 PM

Attendees

- Marwa Faqeeh
- Roa Makhtoob
- Shaymaa Dar Taha
- Abeer Hussein

Topic of Discussion

- Reviewing the completed Phase 1.1 report.
- Verifying the business description and all required sections.
- Checking formatting, grammar, and document organization.
- Making final revisions before submission.

Meeting 4 – Requirements Engineering Meeting

Date: 2/5/2026

Time: 9:00 PM

Attendees:

Table 20: Attendance of meeting 4

Developer Group	Customer Group
Marwa Faqeeh (1220039)	Abdallah Kokash (1220116)
Roa Makhtoob (1221636)	Bilal Ashhab (1220307)
Shaymaa Dar Taha (1222440)	hanna Kaibni (1220214)
Abeer Hussein (1220425)	Jamil Habash (1220194)

Topic of Discussion

- Discussing user and system requirements for Phase 2

Figure 12: Online Meeting with Customer Group

Figure 13: Requirements Discussion Meeting

Meeting 5 – Phase 2 Review Meeting

Date: 9/5/2026

Time: 9 PM

Attendees

- Marwa Faqeeh
- Roa Makhtoub
- Shaymaa Dar Taha
- Abeer Hussein

Topic of Discussion

- Reviewing the system requirements.
- Verifying requirement consistency.

Preparing the final version of the Phase 2 report

Figure 14: Team Meeting to Finalize the Task

Meeting 6– Phase 1.1 Feedback Review Meeting

Date: 14/5/2026

Time: 10 PM

Attendees

- Marwa Faqeih
- Roa Makhtoob
- Shaymaa Dar Taha
- Abeer Hussein

Topic of Discussion

- Reviewing the instructor's feedback on Phase 1.1.
- Discussing the required modifications to the user and system requirements.
- Assigning the necessary revisions among team members.

Figure 15: Discussion of the Feedback on Phase 1.1

Meeting 7 – Phase 3 Analysis Meeting

Date: 30/5/2026

Time: 5:00 PM

Attendees

- Marwa Faqueeh
- Roa Makhtoob
- Shaymaa Dar Taha
- Abeer Hussein

Topic of Discussion

- Reviewing the Phase 3 requirements and deliverables.
- Reading and discussing the Phase 3 instructions.
- Distributing the Phase 3 tasks and responsibilities among the team members.
- Planning the analysis work and setting internal deadlines.
- Starting the development of the Use Case Diagram and Use Case Specifications.

Meeting 8 – Phase 3 Use Case Diagram Development Meeting

Date: 5/6/2026

Time: 5:00 PM

Attendees

- Marwa Faqeeh
- Roa Makhtoob
- Shaymaa Dar Taha
- Abeer Hussein

Topic of Discussion

- Reviewing and developing the overall Use Case Diagram.
- Identifying the main system actors.
- Discussing the relationships between actors and use cases.
- Reviewing include and extend relationships in the Use Case Diagram.
- Updating the Use Case Diagram using Lucidchart.
- Preparing the Use Case Diagram for inclusion in the Phase 3 report.

Figure 16: Reviewing and developing the overall Use Case Diagram

Meeting 9 – Phase 3 Activity Diagram Development Meeting

Date: 6/6/2026

Time: 7:00 PM

Attendees

- Marwa Faqeeh
- Roa Makhtoob
- Shaymaa Dar Taha
- Abeer Hussein

Topic of Discussion

- Reviewing the Activity Diagram requirements.
- Discussing the workflows of the selected use cases.
- Reviewing and refining the Activity Diagrams.
- Ensuring consistency between the Activity Diagrams and the Use Case Specifications.
- Finalizing the Activity Diagrams for inclusion in the Phase 3 report.

Meeting 10– Phase 3 Analysis Meeting

Date: 7/6/2026

Time: 5 PM

Attendees

- Marwa Faqeeh
- Roa Makhtoob
- Shaymaa Dar Taha
- Abeer Hussein

Topic of Discussion

- Reviewing and finalizing all Phase 3 deliverables.
- Reviewing the Use Case Diagram and Use Case Specifications.
- Reviewing the Activity Diagrams.
- Verifying the consistency between the system requirements and the analysis models.
- Finalizing the Phase 3 report before submission.

Figure 17: Reviewing and finalizing all Phase 3 deliverables.

Meeting 11 – Phase 4 Planning Meeting

Date: 16/6/2026

Time: 7:00 PM

Attendees

- Marwa Faqeeh
- Roa MakhtooB
- Shaymaa Dar Taha
- Abeer Hussein

Topic of Discussion

- Reading and discussing the Phase 4 requirements.

- Reviewing the design tasks and project deliverables.
- Distributing the Phase 4 tasks among the team members.
- Planning the implementation schedule and setting internal deadlines.
- Discussing the approach for completing the design diagrams.

Meeting 12 – Phase 4 Design Development Meeting

Date: 20/6/2026

Time: 7:30 PM

Attendees

- Marwa Faqeeh
- Roa Makhtoob
